

Setting the Scene:

Country Access: making forecasts reality

Daniel Low-Beer, World Health Organization

Collaboration WHO and MPP

- Expanded collaboration HIV and Hepatitis
- Forecasts and Scenarios
 - Innovations: new drugs and diagnostics
 - Debate around forecasts, test and make actionable
 - Don't just ask what is feasible, but how to make it feasible
- Country Access
 - Strengthen discussion: manufacturers, partners, countries
 - Strategies to improve access and market effectiveness

Key issues in the context

- **SDGs and ending epidemics**
 - Strategic in impact of our investments with one health goal
 - Data is one of 3 means of implementation: two targets (17.18, 17.19)
- **New WHO strategies HIV, STIs and Hepatitis**
 - Elimination goals for HIV and Hepatitis by 2030
 - Universal access to treatment and diagnostics
 - Focus on how to achieve impact
- **Limitations to financing: improved innovations and effectiveness**

Importance of forecasts

- Invisible and visible hand of the market
 - Align and challenge assumptions
 - Improved data: triangulation and individual patient monitoring
 - Innovations: HIV and hepatitis drugs, self testing, delivery
 - Market effectiveness: manufacturing and demand
- Country Access
 - Health diplomacy based on data: joint curves and goals
 - Sustainable market and impact

Discussion towards country access

- Increasing focus on country access
 - Participation of countries and support to access
- Actions to improve effectiveness of markets
 - Innovations, efficiencies, timing
 - Sustainability of supply and demand
 - Ask what is feasible and how to make it feasible
- Context of semi-formal and robust discussion: questions are never indiscrete .. answers sometimes are
